TRA Dataset License Agreement

TRA is a large dataset for vision based traffic risk assessment. The aims of the TRA dataset include (1) providing the risk level labeling of traffic scenes in first-person videos; (2) facilitating the research related to traffic risk assessment based on on-board vision. **Therefore, the TRA dataset is now made available for research purpose only on a case-by-case basis only.** The Lab of computer vision and pattern recognition of Shandong University is serving as the technical agent for distribution of the dataset. The End-User named must be a legal institution, or a department or section of a named legal institution, not an individual nor a project, the person signing this Agreement has to be duly authorized by the institution for such signatures (e.g., Department or Administrative Head or similar) and shall be liable for such authorization. Failure to observe the restrictions will result in access being denied for the request of the future version of the TRA dataset and being subject to civil damages in the case of publication of images that have not been approved for release.

The researcher(s) agrees to the following restrictions on the TRA dataset:

1. The TRA dataset is available for non-commercial research purposes only.

2. You agree not to reproduce, duplicate, copy, sell, trade, resell or exploit for any commercial purposes, any portion of the images and any portion of derived data.

3. You agree not to further copy, publish or distribute any portion of the TRA dataset. Except, for internal use at a single site within the same organization it is allowed to make copies of the dataset.

4. The Lab of computer vision and pattern recognition of Shandong University reserves the right to terminate your access to the database at any time.

5. All submitted papers or any public text using the TRA dataset must cite the following papers:

C. Liu, Z. Li, F. Chang, S. Li and J. Xie, "Temporal Shift and Spatial Attention-Based Two-Stream Network for Traffic Risk Assessment," in IEEE Transactions on Intelligent Transportation Systems, doi: 10.1109/TITS.2021.311512

6. The final explanation of this agreement refers to the Lab of computer vision and pattern recognition, Shandong University, China.
